

Monthly Weather Summary in Northern

March 2020

In March 2020, the weather condition was hot in most areas of Thailand almost the whole month with very hot in many places in the northern as a result of the heat low pressure cell covering upper Thailand. The mean temperature in March 2020 were higher than normal in all parts and the new highest maximum temperature were established in some stations. However, due to the influence of the high pressure area from China extending its ridge to cover northeastern part and the South China Sea during the middle and the end of the month in addition with the periodical prevailing of the southerly and southeasterly wind over upper Thailand which bring the moisture from the Gulf of Thailand caused unusual rainfall with thundershower and gusty wind in many areas and hail in some places and temperature relatively decreased at that time.

1st-10th March : Heat low pressure cell covering upper Thailand and the southerly and southeasterly wind prevailing over the mentioned areas almost the whole period and the high pressure areas from China extended its ridge to cover northeastern part of Thailand and the South China Sea during the middle of the period. These conditions caused hot weather in most areas in upper Thailand almost the whole period and very hot weather in many areas during late period. The maximum temperature was 41.4 °C at Thap Phueng, Sri Samrong in Sukhothai province on 9th March. For rainfall, upper Thailand received unusual rainfall mainly during the middle of the period. Thunderstorm was reported at Phichit province on 2nd April, at Phayao and Phitsanulok province on 3rd April, at Chiang Rai, Phrae and Kamphaeng Phet province on 4th April.

11th-20th March : Heat low pressure cell still covered over upper Thailand throughout the period and the high pressure areas extended its ridge to cover northeastern and the South China Sea during mid-period with the prevailing of the southerly and southeasterly wind over the northeastern, central and eastern parts during the middle and the end of the period. These caused generally hot weather in upper Thailand with very hot weather in many areas during early period after that temperature relatively decreased in many areas for few days and risen until the weather became hot with very hot in some areas at the end of the period. The maximum temperature was 42.4 °C at Mueang in Tak province on 13th March. Thunderstorms was reported at Lampang, Tak and Uttaradit province on 15th March, at Phetchabun and Phitsanulok province on 20th March.

21st-31st March : With the covering of heat low pressure cell over upper Thailand throughout the period and the prevailing of the southerly and southeasterly wind in addition with the passage of the westerly trough through the upper northeastern part during early period. These caused hot weather in general especially in the northern that had successive hot day in many places during the second half of the period.

The maximum temperature was 42.9°C at Thoen in Lampang province on 30th and 31st March. For rainfall, isolated to scattered rain with heavy rainfall in some areas. Thundersorms was reported at Phitsanulok province on 21st March, at Phetchabun province on 22nd March.

Mean temperature of this month was higher than normal. The minimum temperature was 13.4°C at Chiang Rai province on 12th March. The maximum temperature was 42.9°C at Thoen in Lampang province on 30th and 31st March. For rainfall, was 13.1 millimeter lower than normal(47%).
